BONAFIDE CERTIFICATE

This is to certify that this Summer Internship project report "**Foodie – Food Delivery Web Application**" is the Bonafide work **of A SHEIK ABDULLAH (810023205306)** and has satisfactorily completed the course **of IT3711 – SUMMER INTERNSHIP** for **SEVENTH semester, B.TECH INFORMATION TECHNOLOGY** during the academic year **2026–2027**.

Faculty Incharge **Head of the Department**

Submitted for the practical examination held on _____.

ABSTRACT

The Foodie – Food Delivery Web Application is a UI/UX design project developed during my internship at Media Wave Technology, Tiruchirappalli. The project focuses on designing a modern, attractive, and user-friendly digital food ordering experience that helps users discover restaurants, search food items, place orders, make payments, and track deliveries with minimal effort.

The project follows a user-centered Design Thinking approach consisting of Empathize, Define, Ideate, Wireframing, Visual Design, Prototyping, and Testing. User research and competitor analysis were used to understand common issues in existing food delivery applications. Based on the findings, user personas, a user journey map, user flow, low-fidelity wireframes, a design system, high-fidelity screens, and an interactive prototype were created.

Figma was the primary design and prototyping tool, supported by Stitch AI for rapid interface exploration. The final design uses a consistent visual language with an orange primary color, white backgrounds, Poppins typography, Material Icons, rounded cards and buttons, and responsive layouts. The application includes login, home, categories, restaurant listing, food details, cart, payment, order tracking, profile, wishlist, help and support, and order management screens.

Usability, responsive, functional, visual, and accessibility checks were carried out on the prototype. The results indicated that the proposed interface improved navigation clarity, reduced user effort, simplified the checkout experience, and maintained visual consistency across screens. The internship provided practical exposure to professional UI/UX workflows and strengthened my skills in research, information architecture, wireframing, design systems, prototyping, testing, documentation, and presentation.

1.INTRODUCTION

An internship is an essential part of professional education because it connects academic learning with real-world industrial practice. During the internship at Media Wave Technology, Tiruchirappalli, I worked in the UI/UX Design domain and designed a modern Food Delivery Web Application named Foodie.

The project focused on creating a simple and attractive interface for users who want to discover restaurants, search food items, place orders, make payments, and track deliveries. The design process was carried out primarily in Figma and followed a user-centered Design Thinking methodology.

The project included user research, competitor analysis, requirement analysis, information architecture, user personas, user journey mapping, user flow, low-fidelity wireframes, a design system, high-fidelity UI design, interactive prototyping, and usability testing.

1.1 OBJECTIVES OF THE INTERNSHIP

- To understand professional UI/UX workflows followed in the software industry.
- To perform user research, requirement analysis, and competitor analysis.
- To create user personas, user journeys, and user flows.
- To design low-fidelity wireframes and high-fidelity interfaces using Figma.
- To create a reusable design system with consistent typography, color, spacing, icons, and components.
- To develop an interactive prototype for usability evaluation.
- To improve problem-solving, creativity, communication, teamwork, and documentation skills.

1.2 SCOPE OF THE PROJECT

The scope of the Foodie – Food Delivery Web Application includes designing a complete food ordering experience that supports the major stages of the customer journey. The application enables users to register, browse restaurants, search for food items, view food details, add items to a cart, select a payment method, track orders, manage profiles, and save favorite restaurants and dishes.

The project focuses primarily on UI/UX design rather than backend software development. It covers the design process from research and requirements to

wireframes, visual design, prototyping, and testing. The final interface is intended to provide a clear and consistent experience across common screen sizes.

1.3 PROJECT OBJECTIVES

- Reduce the effort required to find restaurants and food items.
- Provide a clear and predictable navigation structure.
- Simplify cart and checkout interactions.
- Present payment choices in an understandable manner.
- Provide clear order-status and delivery information.
- Maintain visual consistency through reusable components.
- Create a developer-friendly prototype that can be implemented as a web application.

1.4 BENEFITS OF THE INTERNSHIP

- Practical exposure to industry-oriented UI/UX workflows.
- Hands-on experience with Figma, prototyping, and reusable components.
- Better understanding of user-centered design and Design Thinking.
- Experience in documenting a complete case study and project report.
- Improved communication, presentation, teamwork, and problem-solving skills.

1.5 DESIGN APPROACH

The Foodie project follows a user-centered approach in which design decisions are connected to user needs and observed pain points. The process begins with understanding users and existing food delivery experiences, continues through definition and ideation, and then moves into wireframing, visual design, prototyping, and testing.

Stage	Purpose
Empathize	Understand user behavior, expectations, and pain points.
Define	Convert research findings into clear design problems.

Ideate	Explore alternative layouts, navigation patterns, and interactions.
Wireframe	Establish structure and information hierarchy before visual styling.
Visual Design	Apply colors, typography, icons, components, and spacing.
Prototype	Connect screens and simulate the user journey.
Test	Evaluate usability, navigation, readability, and consistency.

1.6 INTERNSHIP OUTCOME

The internship strengthened my practical understanding of UI/UX design and gave me experience in converting user requirements into a structured digital interface. The Foodie project improved my confidence in using Figma and in presenting design decisions through research, wireframes, design systems, prototypes, and testing results.

1.7 TECHNOLOGIES AND TOOLS

Technology / Tool	Purpose
Figma	UI design, wireframing, components, design system, and interactive prototype.
Stitch AI	Rapid generation and exploration of initial interface concepts.
HTML5	Understanding the structural foundation of the designed web pages.
CSS3	Understanding responsive layout, spacing, styling, and visual behavior.

JavaScript	Understanding interactive behaviors such as search, navigation, cart updates, and validation.
Google Fonts	Typography selection and consistency.
Material Icons	Consistent iconography across the interface.

Figma was the primary design environment. It supported reusable components, Auto Layout, prototyping, collaboration, and developer handoff. Stitch AI was used as an assistive tool for exploring initial layouts, after which the designs were refined in Figma.

2.COMPANY PROFILE

2.1 ABOUT MEDIA WAVE TECHNOLOGY

Media Wave Technology is a software development company located in Tiruchirappalli, Tamil Nadu. The organization provides digital solutions for businesses, educational institutions, and startups, with services covering web application development, mobile application development, UI/UX design, digital marketing, graphic design, cloud-based solutions, and software consulting.

The company follows modern software development practices and emphasizes user-centered design. Designers, developers, and project teams work together to build reliable, scalable, and user-friendly digital products.

As part of the internship, I worked under professional guidance and gained practical exposure to the complete UI/UX workflow, from understanding requirements to producing an interactive prototype and documenting the final work.

Company Details

Item	Details
Company Name	Media Wave Technology
Location	Tiruchirappalli, Tamil Nadu

Industry	Information Technology and Software Services
Major Areas	Web, Mobile, UI/UX, Digital Solutions
Internship Domain	UI/UX Design
Project	Foodie – Food Delivery Web Application

2.2 VISION

The vision of Media Wave Technology is to deliver innovative, reliable, and user-friendly digital solutions that improve business productivity and customer satisfaction. The organization aims to adopt emerging technologies while maintaining quality, creativity, and professionalism.

2.3 MISSION

- Delivering high-quality software products and digital solutions.
- Designing user-friendly and efficient UI/UX experiences.
- Adopting modern technologies and innovative approaches.
- Encouraging creativity, learning, and continuous improvement.
- Maintaining strong client relationships through quality service.
- Providing students with practical industrial exposure.
- Promoting teamwork and professional ethics.

2.4 SERVICES OFFERED

- Web Application Development
- Mobile Application Development
- UI/UX Design
- Digital Marketing
- Graphic Design
- Software Testing and Quality Assurance
- Website Maintenance
- Cloud-based Solutions

2.5 INTERNSHIP ENVIRONMENT

The internship environment provided practical exposure to professional project planning, requirement understanding, design iteration, feedback collection, documentation, and presentation. Working on the Foodie project helped me understand that successful UI/UX design requires both visual skill and a clear reasoning process.

The organization encouraged iterative design. Initial concepts were reviewed and refined, and the final screens were connected into an interactive prototype. This workflow improved my ability to accept feedback, identify usability problems, and justify design decisions.

2.6 ROLE AND RESPONSIBILITIES

- Understand project requirements and user needs.
- Study existing food delivery applications and identify usability issues.
- Create user personas, journey maps, and user flows.
- Develop low-fidelity wireframes.
- Create and maintain the design system.
- Design high-fidelity UI screens in Figma.
- Create interactive prototype connections.
- Perform usability and visual consistency checks.
- Prepare documentation and presentation material.

3.DAILY WORK REPORT

The internship activities were carried out progressively from requirement understanding and research to wireframing, visual design, prototyping, testing, and documentation. The following daily report summarizes the work completed during the internship.

Day 1: Attended internship orientation and understood project guidelines, deliverables, and reporting format. The Foodie project scope was discussed.

Day 2: Collected initial requirements for a food delivery web application and identified the main user groups and business goals.

Day 3: Studied existing food delivery applications and documented common navigation, search, ordering, payment, and tracking patterns.

Day 4: Performed competitor analysis of popular food delivery platforms and noted strengths, weaknesses, and usability opportunities.

Day 5: Defined the problem statement, project objectives, scope, and key functional requirements.

Day 6: Studied the Design Thinking process and planned the Empathize, Define, Ideate, Wireframe, Visual Design, Prototype, and Test stages.

Day 7: Conducted user research through observation, interviews, and survey-oriented questions related to online food ordering.

Day 8: Consolidated research findings and identified user pain points such as complex navigation, long checkout, and poor search.

Day 9: Created the first user persona representing a college student who needs quick and simple food ordering.

Day 10: Created the second user persona representing a working professional who values speed, personalization, and reliable tracking.

Day 11: Prepared the user journey map covering discovery, browsing, selection, cart, payment, tracking, and delivery.

Day 12: Created the main user flow from login/register to home, categories, restaurant, food details, cart, checkout, payment, and tracking.

Day 13: Started low-fidelity wireframes for login, home, categories, restaurant listing, food details, cart, payment, and profile.

Day 14: Reviewed wireframes and refined content hierarchy, navigation, button placement, and screen relationships.

Day 15: Established the visual direction for the interface, including orange primary color, white background, Poppins typography, and Material Icons.

Day 16: Created reusable components such as buttons, search bar, food cards, restaurant cards, category cards, input fields, and navigation.

Day 17: Designed the Login screen and finalized form layout, sign-up action, and supporting interactions.

Day 18: Designed the Home screen with search, categories, popular restaurants, featured dishes, offers, and bottom navigation.

Day 19: Designed the Categories and Restaurant Listing screens with cards, ratings, delivery information, and cuisine details.

Day 20: Designed the Offers and New on Foodie sections with promotional content, coupons, and newly added restaurants.

Day 21: Designed the Orders screen with active orders, order history, and quick reorder actions.

Day 22: Designed the Track Order screen with delivery status, ETA, live tracking concept, and delivery partner details.

Day 23: Designed the Payment screen with UPI, card, net banking, and cash-on-delivery options.

Day 24: Designed Help & Support and Profile screens, including FAQs, contact support, account details, saved addresses, and settings.

Day 25: Designed the Wishlist experience for favorite restaurants and food items and added quick reorder behavior.

Day 26: Connected the major screens into an interactive Figma prototype and checked the primary ordering journey.

Day 27: Performed usability, navigation, visual consistency, responsive layout, and accessibility-oriented checks.

Day 28: Incorporated mentor feedback and refined navigation, spacing, button placement, readability, and screen consistency.

Day 29: Prepared screenshots, organized the final Figma frames, documented the design system, and reviewed the complete prototype.

Day 30: Completed final documentation, analyzed the project outcomes, prepared the internship report, and organized the final presentation.

5. FOODIE – FOOD DELIVERY WEB APPLICATION

5.1 EXISTING SYSTEM

Existing food delivery experiences can become difficult when users have to move through too many screens, deal with inconsistent navigation, search with limited filters, or complete a long checkout process. Users may also find it difficult to compare restaurants, understand delivery information, or track orders clearly.

- Complicated navigation between screens.
- Long or unclear checkout process.

- Poor search and filtering experience.
- Inconsistent visual hierarchy.
- Limited clarity in payment choices.
- Difficult order tracking and status communication.

5.2 PROPOSED SYSTEM

The proposed Foodie design is a centralized, user-friendly food ordering experience that organizes the customer journey into clear and predictable stages. It provides fast access to search and categories, clear restaurant and food information, a manageable cart, simple payment selection, and visible order tracking.

- Clean and consistent navigation.
- Prominent search and category discovery.
- Clear restaurant and food information.
- Simple cart and checkout experience.
- Multiple payment options presented clearly.
- Order status and delivery information in one place.
- Reusable components for visual consistency.

5.2 PROPOSED SYSTEM – DESIGN CHARACTERISTICS

Area	Design Approach
Navigation	Clear hierarchy with predictable primary navigation.
Discovery	Search, categories, popular restaurants, and offers.
Food Selection	Image-led cards with price, ratings, and actions.
Checkout	Simple cart review followed by payment selection.
Tracking	Status, ETA, and delivery partner information.

Account	Profile, addresses, payment methods, and settings.
Support	FAQs, contact support, and issue reporting.
Consistency	Reusable components and shared design tokens.

5.3 CAPABILITIES

- User registration and login.
- Restaurant browsing and food search.
- Food category filtering and discovery.
- Food details and cart management.
- Online payment selection.
- Order confirmation and tracking.
- Wishlist and quick reorder.
- Profile and saved address management.
- Help and customer support.
- Responsive, consistent UI across screens.

5.4 FUNCTIONAL REQUIREMENTS

User Registration: The application should allow users to create accounts using personal details and a password.

User Login: Registered users should be able to securely access their account.

Browse Restaurants: Users should be able to view restaurants using ratings, cuisine, delivery time, and other information.

Search Food Items: Users should quickly find restaurants or dishes using keywords.

Food Categories: Food should be organized into recognizable categories.

Food Details: Users should view images, descriptions, ingredients, prices, ratings, and reviews.

Shopping Cart: Users should add, update, and remove food items before checkout.

Online Payment: The interface should support UPI, cards, net banking, and cash on delivery.

Order Tracking: Users should be able to view the status and expected delivery information.

Wishlist: Users should save favorite restaurants and dishes.

Profile Management: Users should manage personal details, addresses, settings, and payment methods.

Help & Support: Users should be able to view FAQs, contact support, and report issues.

5.5 NON-FUNCTIONAL REQUIREMENTS

Performance: The interface should feel responsive and support fast access to important actions.

Usability: The interface should be simple, intuitive, and easy to understand.

Accessibility: Readable typography, sufficient contrast, and clear navigation should be maintained.

Responsiveness: Layouts should adapt to desktop, tablet, and mobile screen sizes.

Reliability: Interactions should behave consistently without confusing states.

Maintainability: Reusable components and organized design specifications should support future changes.

5.6 PROBLEM STATEMENT

Although food delivery platforms are widely used, users may experience complicated navigation, slow or confusing checkout processes, inconsistent interfaces, weak search experiences, and unclear order tracking. The objective of Foodie is to provide a simple, attractive, and user-centered ordering experience that reduces user effort and improves clarity at every major stage.

6. PROPOSED METHOD

6.1 USER RESEARCH

User research was conducted to understand how people interact with existing food delivery applications and what they expect from an improved experience. The research focused on college students, working professionals, and families who frequently use online food ordering services.

Research Method	Purpose
Online Survey	Understand preferences, ordering habits, payment choices, and usability expectations.
User Interviews	Identify expectations, common issues, and suggestions.
Observation	Study navigation and ordering behavior on existing platforms.
Competitor Analysis	Compare restaurant browsing, search, payment, tracking, and interaction patterns.

6.2 INFORMATION ARCHITECTURE

The information architecture organizes the application into logical groups so users can find information without unnecessary navigation. The primary structure contains authentication, home/discovery, categories, restaurants, food details, cart, payment, orders, tracking, wishlist, profile, and support.

6.3 DESIGN THINKING PROCESS

- Empathize
- Define
- Ideate
- Wireframing
- Visual Design
- Prototyping
- Testing

6.4 WIREFRAMING

Low-fidelity wireframes were created to establish screen structure, content hierarchy, navigation, and interaction placement before applying visual styling. The wireframes covered Login, Home, Categories, Restaurant Listing, Food Details, Cart, Payment, and Profile.

6.5 DESIGN SYSTEM

A reusable design system was created in Figma to maintain consistency. The documented system includes the primary orange color, white backgrounds, Poppins typography, Material Icons, rounded buttons and cards, consistent spacing, and responsive layout rules.

6.6 PROTOTYPING

Interactive prototype connections were created in Figma to simulate the complete ordering journey. Prototyping helped validate navigation, communicate interactions, identify usability issues early, and reduce unnecessary changes before implementation.

6.7 TESTING

The prototype was evaluated through usability, functional interaction, responsive layout, visual consistency, and accessibility-oriented checks. Mentor feedback was incorporated into the final design.

7. ALGORITHM

7.1 USER LOGIN AND REGISTRATION

- User opens the Login screen.
- User enters email/phone and password.
- System checks whether the required fields are completed.
- If credentials are valid, the user is taken to the Home screen.
- If the user is new, the Sign Up option opens registration.
- Registration data is entered and validated before account creation.
- After successful registration, the user can continue to Login.

7.2 FOOD DISCOVERY AND SEARCH

- User opens the Home screen.
- User searches for a restaurant or food item, or selects a category.
- Matching restaurants or dishes are displayed.
- User selects a restaurant.
- Available food items are shown with relevant details.
- User opens Food Details and decides whether to add the item to the cart.

7.3 CART AND CHECKOUT

- User selects one or more food items.
- Selected items are added to the cart.
- User reviews quantity, price, and order summary.
- User updates or removes items if required.
- User proceeds to checkout.
- User selects or confirms delivery information.
- User proceeds to payment.

7.4 PAYMENT

- Display the booking/order summary.
- Present available payment methods.
- User selects UPI, Credit/Debit Card, Net Banking, or Cash on Delivery.
- Payment information is confirmed according to the selected method.
- After successful completion, show order confirmation.

7.5 ORDER TRACKING

- Open the Orders screen.
- Select an active order.
- Display current order status.
- Show ETA and delivery information.
- Continue tracking until the order is delivered.
- Allow the user to view order history after completion.

7.6 WISHLIST AND QUICK REORDER

- User marks a restaurant or food item as favorite.
- The selected item is stored in the Wishlist view.
- User opens Wishlist from the navigation or profile area.
- User selects a saved restaurant or food item.
- User can view details and quickly reorder.

7.7 SUPPORT FLOW

- User opens Help & Support.
- User reviews frequently asked questions.
- If required, user contacts support or reports an issue.
- The issue is submitted with relevant information.
- User receives a response or resolution through the support process.

7.8 GENERAL DESIGN ALGORITHM

Requirement → Research → Problem Definition → Ideation → Information Architecture → Wireframe → Design System → High-Fidelity UI → Prototype → Testing → Feedback → Refinement → Final Handoff

8. DESIGN IMPLEMENTATION

8.1 INTRODUCTION

This chapter explains the implementation of each major screen designed for the Foodie web application. All interfaces were created in Figma using the common design system and reusable components.

8.2 LOGIN AND HOME

Login Screen

The Login page provides email/phone and password fields, Forgot Password, Social Login, and Sign Up actions. The layout is designed to reduce cognitive load and make the primary action easy to identify.

Home Screen

The Home page acts as the main discovery dashboard. It includes search, categories, popular restaurants, featured dishes, offers, and bottom navigation.

8.3 CATEGORIES AND RESTAURANTS

Categories Screen

The Categories screen organizes food into visually recognizable groups using category cards and food imagery.

Restaurant Screen

The Restaurant Listing screen displays restaurant cards with ratings, delivery time, distance, and cuisine type. The layout supports fast scanning and comparison.

8.4 OFFERS AND NEW ON FOODIE

Offers Screen

The Offers screen presents discounts, coupons, cashback offers, and limited-time deals in a prominent visual format.

New on Foodie

This section highlights newly added restaurants, trending restaurants, and recently added menus to encourage discovery.

8.5 ORDERS AND TRACK ORDER

Orders Screen

The Orders screen separates active orders and order history and provides a quick reorder action.

Track Order

The tracking screen communicates live status, ETA, delivery partner details, and progress so users can understand where the order is in the delivery journey.

8.6 PAYMENT, HELP AND PROFILE

Payment Screen

The Payment screen presents UPI, Credit/Debit Card, Net Banking, and Cash on Delivery choices along with the order summary.

Help & Support

The support area provides FAQs, contact support, and issue reporting.

Profile Screen

The profile area manages personal information, saved addresses, payment methods, settings, and logout.

Wishlist

The Wishlist allows users to save favorite restaurants and foods and supports quick reorder.

8.7 COMPONENT AND PROTOTYPE IMPLEMENTATION

Reusable Components

Primary Button, Secondary Button, Search Bar, Food Card, Restaurant Card, Category Card, Navigation Bar, Rating Badge, Input Fields, and supporting UI patterns were reused to maintain consistency.

Prototype Connections

Primary navigation and ordering interactions were connected in Figma so the user can move from authentication through discovery, cart, payment, confirmation, and tracking.

9.SAMPLE OUTPUT

The following sample outputs are taken from the Foodie UI/UX project and demonstrate the final high-fidelity interface screens developed during the internship.

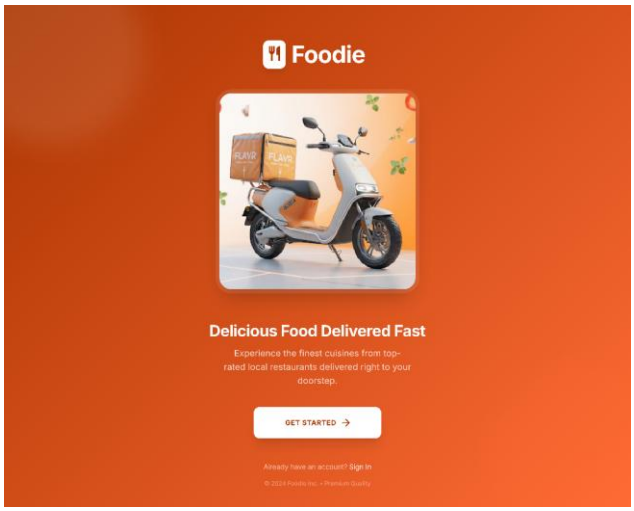

Figure 9.1 – Foodie Landing / Introduction Screen

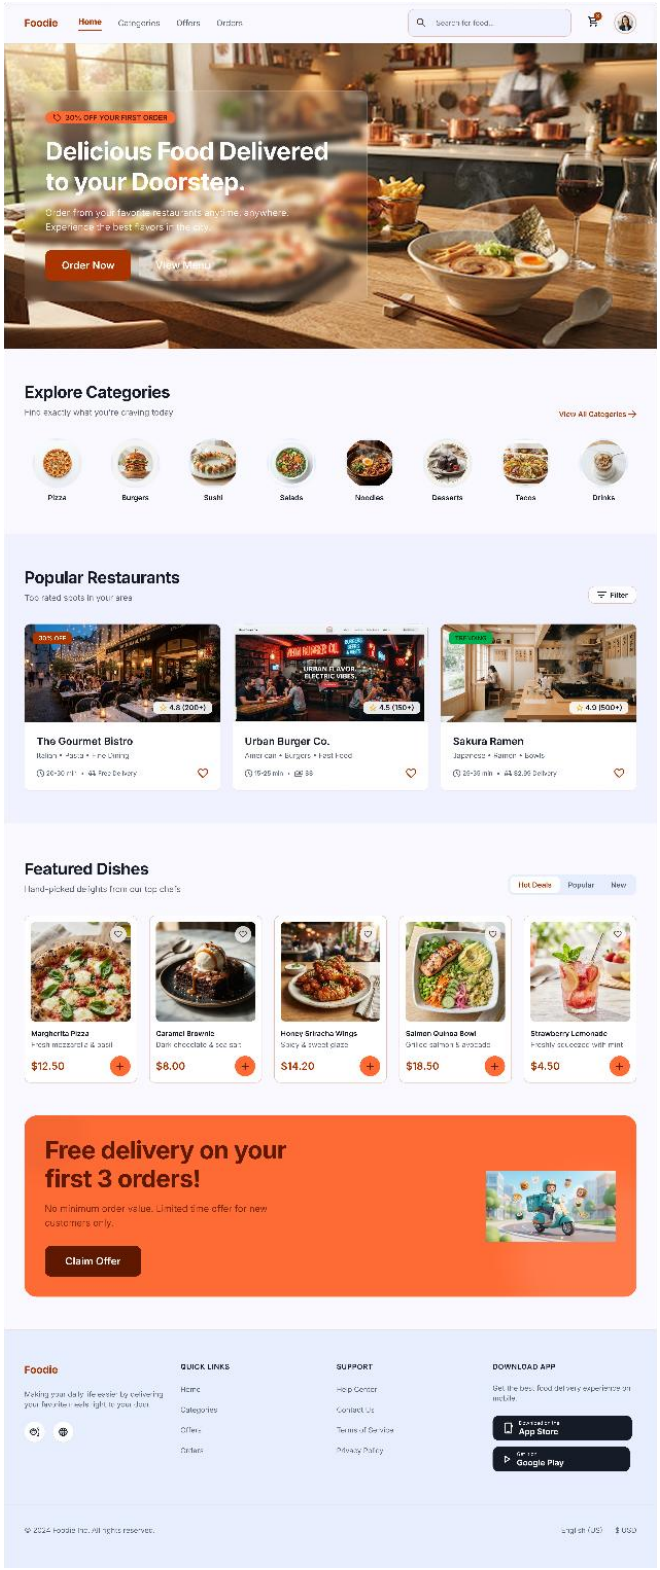

Figure 9.2 – Foodie Home Screen

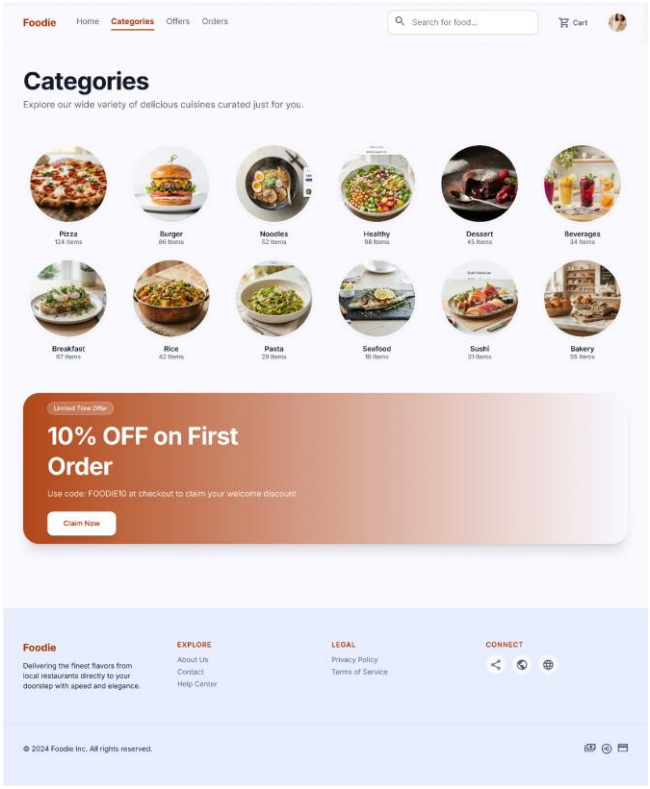

Figure 9.3 – Food Categories Screen

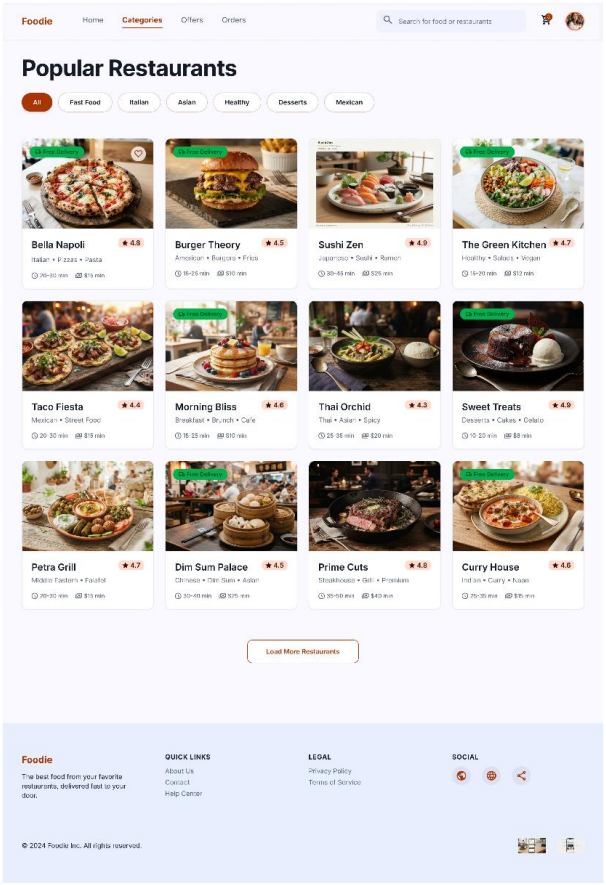

Figure 9.4 – Popular Restaurants Screen

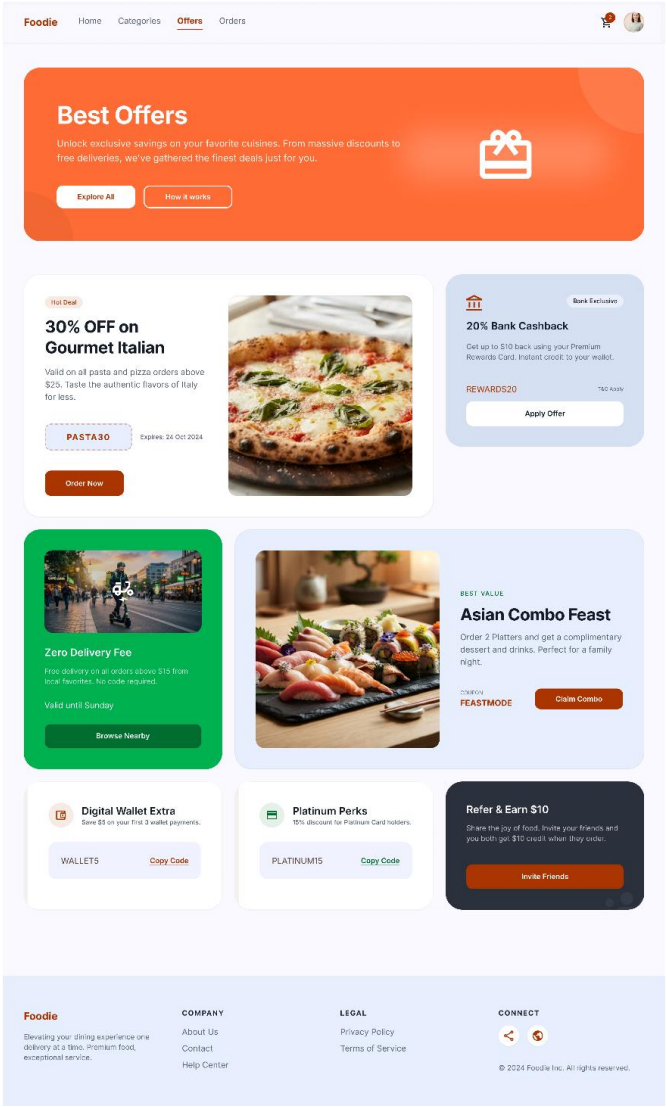

Figure 9.5 – Offers / Best Offers Screen

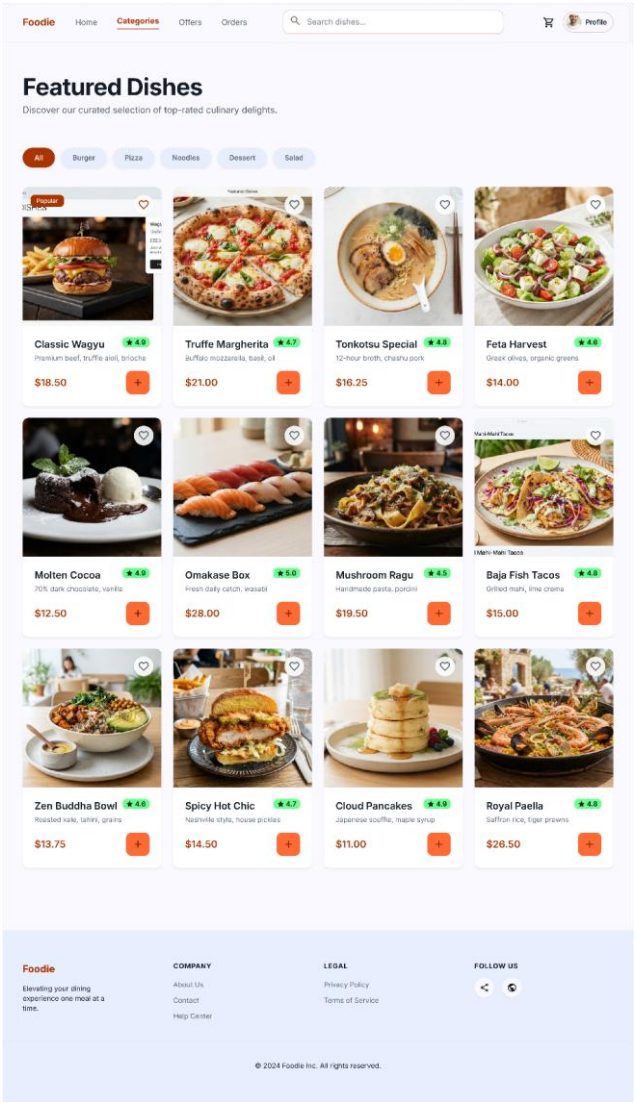

Figure 9.6 – Featured Dishes Screen

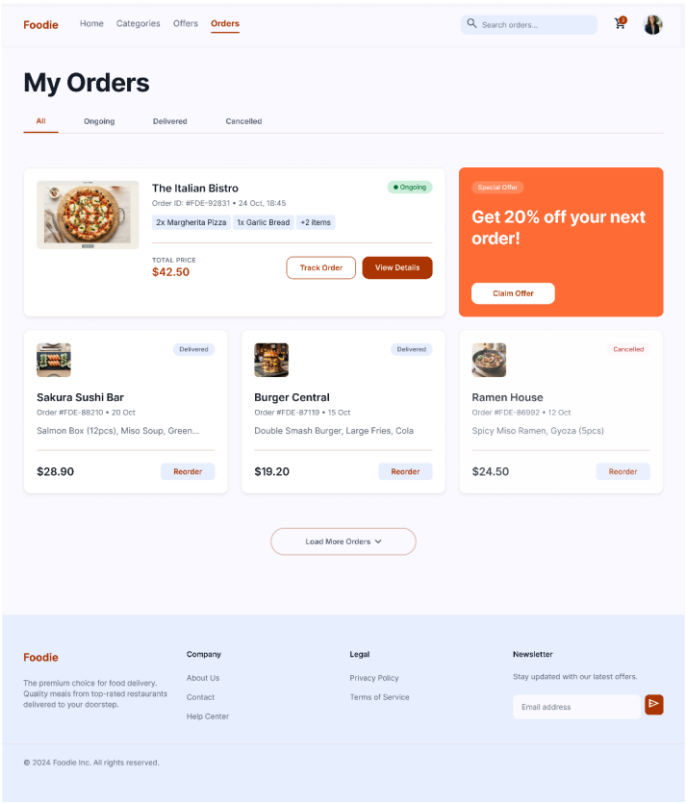

Figure 9.7 – My Orders Screen

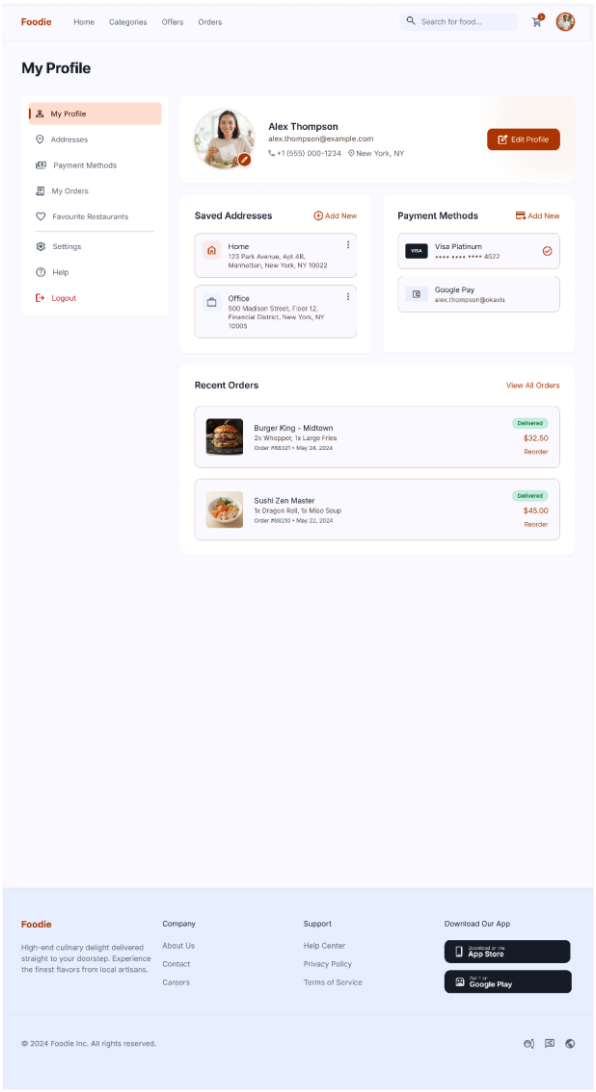

Figure 9.8 – Profile / Account Screen

10.ANALYSIS

The final Foodie prototype was analyzed against the requirements identified during research. The analysis focused on navigation, information hierarchy, visual consistency, checkout simplicity, and the clarity of order tracking.

Area	Observation	Result
Navigation	Primary tasks follow a predictable sequence.	Improved

Search & Discovery	Search and categories provide direct entry points.	Improved
Food Selection	Cards emphasize images, names, prices, and relevant information.	Clear
Checkout	Cart and payment are separated into understandable stages.	Simplified
Tracking	Status and ETA are presented in a dedicated screen.	Clear
Consistency	Shared components, typography, and spacing are reused.	Consistent
Responsiveness	Layouts were planned to adapt to different screen sizes.	Supported

10.1 TESTING RESULTS

Testing of the interactive prototype showed that the major tasks could be completed with minimal assistance. The design was refined after checking navigation, button interactions, readability, responsive behavior, visual consistency, and accessibility-oriented considerations.

Test Case	Expected Result	Actual Result	Status
User Login	Successful login	Successful	Pass
Restaurant Search	Relevant restaurants displayed	Successful	Pass
Add to Cart	Food added to cart	Successful	Pass

Online Payment	Payment flow completed	Successful	Pass
Order Tracking	Order status displayed	Successful	Pass
Profile Update	Information updated	Successful	Pass

11.CONCLUSION

The internship at Media Wave Technology was a valuable learning experience that provided practical exposure to the professional UI/UX design environment. During the internship, I worked on the Foodie – Food Delivery Web Application and applied user-centered design principles to create an intuitive and visually appealing interface.

The project covered the complete design process, including user research, requirement analysis, competitor study, user personas, journey mapping, user flow, wireframing, design system creation, high-fidelity interface design, interactive prototyping, and usability testing. The final design addressed major usability concerns by simplifying navigation, improving discovery, clarifying checkout, and providing visible order tracking.

The internship also strengthened my practical skills in Figma, design systems, responsive layouts, visual hierarchy, prototyping, documentation, presentation, teamwork, and problem solving. Overall, the project improved my confidence in designing real-world digital products and prepared me for future opportunities in UI/UX and Information Technology.

12.FUTURE WORK

The Foodie project can be extended beyond the current UI/UX prototype with additional features and implementation support. The following improvements can be considered in future versions:

- Integration with a production-ready backend and database.
- Real-time restaurant and delivery availability.

- Live GPS-based order tracking.
- Personalized food and restaurant recommendations.
- AI-assisted search and conversational food discovery.
- More advanced restaurant filters and sorting.
- Loyalty points, memberships, and personalized offers.
- Multiple language support and improved accessibility.

- Push notifications for order and promotional updates.
- Dedicated mobile application versions for Android and iOS.
- Performance monitoring and continuous usability testing.
- Further refinement based on real customer feedback after deployment.

12.1 LONG-TERM DESIGN IMPROVEMENT

Future iterations should continue to use research and testing as a feedback loop. Analytics, usability studies, accessibility audits, and customer feedback can be used to refine the interface while preserving the established design system.

Media Wave
TECHNOLOGIES

INTERNSHIP OFFER LETTER

03rd Jun 2026

Dear **Mr. SHEIK ABDULLAH A**

We are pleased to offer you an internship with **MEDIA WAVE TECHNOLOGIES**. This is an internship. Our goal is for you to learn more about **UI/UX DESIGN**.

As we discussed, your internship is expected to last Commence from **June 15, 2026, to July 15, 2026**. However, at the sole discretion of the Company, the duration of the internship may be extended or shortened with or without advance notice.

As an intern, you will not be a Company Employee. Therefore, you will not receive a salary, wages, or other compensation. In addition, you will not be eligible for any benefits that the Company offers its employees.

During your internship, you may have access to confidential, proprietary, and/or trade secret information belonging to the Company. You agree that you will keep all of this information strictly confidential and refrain from using it for your own purposes or from disclosing it to anyone outside the Company. In addition, you agree that, upon conclusion of the internship, you will immediately return to the Company all of its property, equipment, and documents.

Your responsibilities may include assisting in UI/UX design, wireframing, prototyping, user research, interface design, usability testing, and related creative activities.

Sincerely,

Chandru S
(HR Department)

Media Wave
TECHNOLOGIES

Internship Completion Letter

July 15, 2026

Strictly Confidential

To Whom It May Concern

This letter certifies that **Mr. SHEIK ABDULLAH A** has interned in the role of **UI/UX Design with Media Wave Technologies** during the period **15 June-2026 to 15 July-2026.**

While with Media Wave Technologies, he has remained dedicated and loyal to his work and responsibilities with our company. He has done an exemplary job while in this **UI/UX Design role.** He has always maintained a professional and courteous attitude and appearance while with our company.

His decision to end his internship with our company is solely his own decision, and we wish him all the best in his future career opportunities.

If you have any questions, please clarify from the undersigned.

Sincerely,

Chandru S

ATTENDANCE CERTIFICATE

To,

The Head of the Department, Assistant professor,
University College of Engineering (BIT Campus),
Anna University,

Tiruchirappalli-620024.

Dear Sir/MAM,

This is to certify that **Mr. SHEIK ABDULLAH A** maintained excellent attendance during the period from **15th June 2026 to 15th July 2026** while undergoing on **UI/UX DESIGN Internship Training** conducted at **MEDIA WAVE TECHNOLOGIES.**

The listed below status of attendance:

- **Total Working Days:** 27 Days
- **Number of Days Present:** 27 Days
- **Attendance Percentage:** 100%

During this period, she has shown sincere interest, punctuality, and good conduct. We appreciate his commitment and dedication.

With best regards,

Chandru S
